Cutting The Costs Of Document Delivery

A significant enhancement to the overall process is the simple addition of OMR marks to a document. This allows a folder/inserter to provide complete double document security, the capability to target selected customer groups by selective feeding and to group multiple pages or multiple invoices to the same customer. Our solutions are developed to integrate easily within any business environment and are designed for ease of use.

PFE software solutions focus on improving the efficiency and effectiveness of the document delivery process by enhancing document presentation, providing alternative distribution options such as, fax, e-mail, archive, and fully utilizing the functionality of printing and mailing systems.

Find out how our solutions can help you to cut the cost and improve the effectiveness of your document delivery process.

*in*doc.s

Intelligent Document Delivery Solutions

PFE supplies a range of high quality consumables, including a range of envelopes, featuring all the commonly used sizes and formats including #10 and 6 x 9, standard and vertical windows. In addition, we can offer an overprinting service.

As part of our service, we can also supply PFE Envelope Sealing Fluid, Roller Cleaner and Invertible Air Dusters.

Technical Specifications *Minimailer 2 Plus*

- **EasiStart** Operating System
- 250 sheet feeder capacity
- 2 automatic feed stations with nest, collate and fold separately modes
- Multiple feed options from both stations
- Handles paper from 16 - 30 lbs
- Inserts booklets up to 1/16" thick
- Fully automatic fold and envelope settings
- 12 User programmable application memories
- Cycles at 2,500 envelopes per hour
- Simple push-button operation
- Advanced double document calibration
- High Capacity desk-top envelope catcher tray

DIMENSIONS

W: 16¹/₈"; H: 21⁵/₈"; L: 26³/₄" excluding catch tray; Weight: 102 lbs

Minimailer 4 Plus

- **Stack 'n' Go**
- 2, 3 or 4 automatic feed stations with 250 sheet capacity
- 'Daily Post' function for hand feed items
- 3 station cascade
- Handles paper from 16 - 30 lbs
- Inserts booklets up to 1/16" thick
- Fully automatic fold and envelope settings
- 20 User programmable application memories
- Cycles at 3,000 envelopes per hour
- Advanced graphical user interface
- Advanced double document calibration
- High Capacity desk-top envelope catcher tray

DIMENSIONS

W: 16¹/₈"; H: 21⁵/₈"; L: 26³/₄" excluding catch tray; Weight: 110 lbs

OPTIONS (Both Machines)

- On-line Postage Meter
- OMR - Grouping, Select Feed, Out-sort and Forms Security functions

World Leaders

IN MAILROOM TECHNOLOGY

Small and stylish, the *Minimailer 2 Plus* is an advanced desktop folding and inserting machine which answers the increasing demand for sophisticated mailing in a compact and cost effective package.

Now, even many complex manual mailing applications can be automated, with simplicity, freeing up staff and saving you money.

The *Minimailer 2 Plus* operating system, *EasiStart*, will quickly guide you through the machine set up. Even those new to Folder Inserters will be ready to use the *Minimailer 2 Plus* in just a few minutes.

- *EasiStart* operating system makes the whole process simple
- Ideal for Invoices, Statements, Checks and Direct Mail
- High capacity Feed Stations leading to fewer hopper refills
- High insertion rate of up to 2,500 filled envelopes per hour

High Capacity Sheet Feeder

For consistent output the *Minimailer 2 Plus* is fitted with a high capacity Sheet Feeder which is capable of holding up to 250 sheets. This significantly minimises the amount of refills required when processing your mailing.

Easy Access

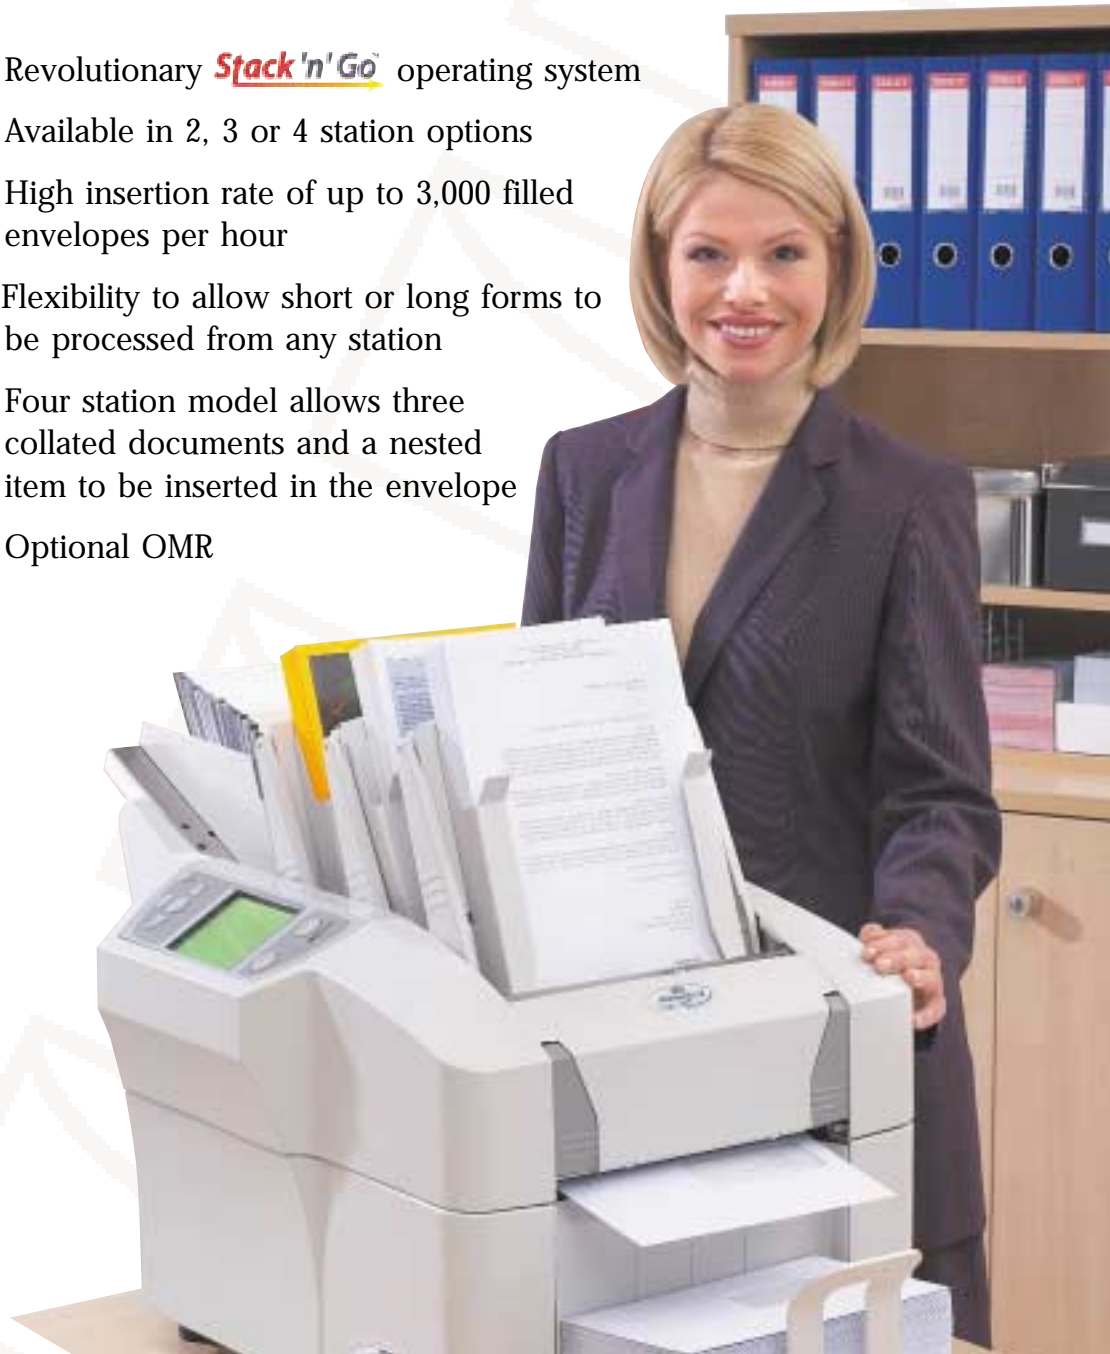

In case of a mis-feed, the clam shell design allows you to gain unrivalled access to the entire paper path. The operator interface will even tell you where to look. The document can then be cleared and the machine re-started immediately.

Based on our ground breaking Minimailer Range, the *Minimailer 4 Plus* advanced desktop folding and inserting system brings a new level of automation with its unique **Stack 'n' Go** feature.

Capable of processing a wide variety of applications quickly and efficiently, the small and stylish system offers total flexibility.

- Revolutionary **Stack 'n' Go** operating system
- Available in 2, 3 or 4 station options
- High insertion rate of up to 3,000 filled envelopes per hour
- Flexibility to allow short or long forms to be processed from any station
- Four station model allows three collated documents and a nested item to be inserted in the envelope
- Optional OMR

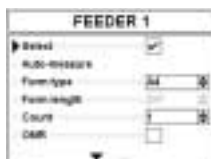

Features

Stack 'n' Go™

The *Minimailer 4 Plus* range is the first PFE product to feature this highly innovative concept. It allows the operator to simply stack any documents of varying sizes plus any insert into the machine, hit the start button and the machine will automatically set itself for your application. There is absolutely no set-up required!

Application Programming

For specific tasks the system allows for up to 20 applications to be stored in memory. The operator interface is extremely concise and simple to use and will guide you through the system step by step in order to set up and perform your application.

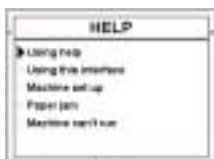

Application List

Simply choose the required application, the machine will automatically set itself and you're ready to go.

Document Misfeed

In the eventuality of a misfeed, the interface will indicate the exact position of the problem and status of the machine.

Help

An intelligent and comprehensive help feature will speedily enable the operator to overcome any machine or operator error.

Flexibility

Your Minimailer 4 Plus can be specified with 2, 3 or 4 stations. Each system is available with OMR or can be upgraded to read OMR at a later date.

Short Form

All feed stations now have the ability to run not only standard forms that require folding, but shorter forms that do not. Form sizes can be varied across all sheet feed stations.

Hand Feed

The 'Daily Post' function enables the machine to handle stapled sets of documents either on their own, or with automatically fed items. This feature can be used to handle varying multi-page sets as an alternative to using the OMR option.

Easy Access

In case of a mis-feed, the clam shell design allows you to gain unrivaled access to the entire paper path. The operator interface will even tell you where to look. The document can then be cleared and the machine re-started immediately.

Automeasure

During the full programming operation, Automeasure allows the user to automatically measure form lengths. This is achieved by simply passing the document through the machine via station one.
