## Proven Results You Can Count On

In the last 25 years, Glory has delivered more than 100,000 automated cash dispensers to banks and financial institutions throughout the world. Today, the legacy continues with the incomparable PD-61 Cash Dispenser.

Smaller overall, yet with a higher cash output than any dispenser in its class, the PD-61 installs virtually anywhere. The user-friendly design will minimize training time, with operator errors a thing of the past. Down time for vault buys can be cut dramatically. Check cashing and cash out transactions will be markedly reduced, allowing more time for customer services in your lobby, motor bank and express check cashing windows.

The PD-61 is backed by Glory's nationwide network of support and service professionals and a Total Quality Philosophy that assures trouble-free performance. The most significant cash the PD-61 will dispense is bottom line profits for your branch.

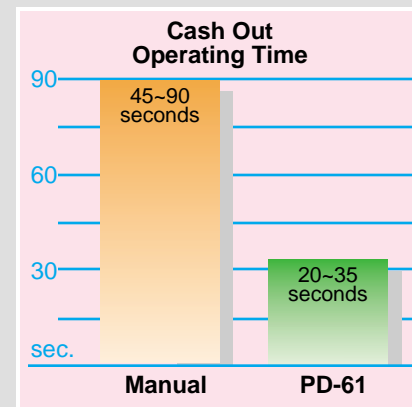

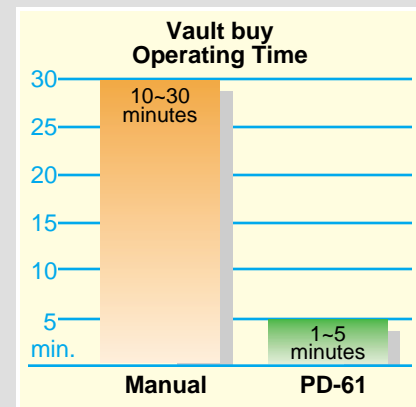

## Features

### • True Two-Teller Dispensing

The PD-61 has an exclusive dual bill presenter design permitting the PD-61 to deliver requested banknotes directly to each teller, guaranteeing true two-teller operation independent from each other. This unique feature eliminates customer wait time, and teller confusion associated with competitor models using single pocket dispensing mechanisms. Superior product ergonomic designs provide true two-teller independence, impressive processing speed, and incredible accuracy while cutting transaction time virtually in half.

## Increase Cash Dispensing Productivity

Banks around the country are benefiting from eliminated vault buy down time and faster cash out transactions. Depending on your operation, a typical vault buy involves two tellers making an extra trip to the vault, with verifications, authorizations and the inevitable interruptions.

### • Single Note Divert

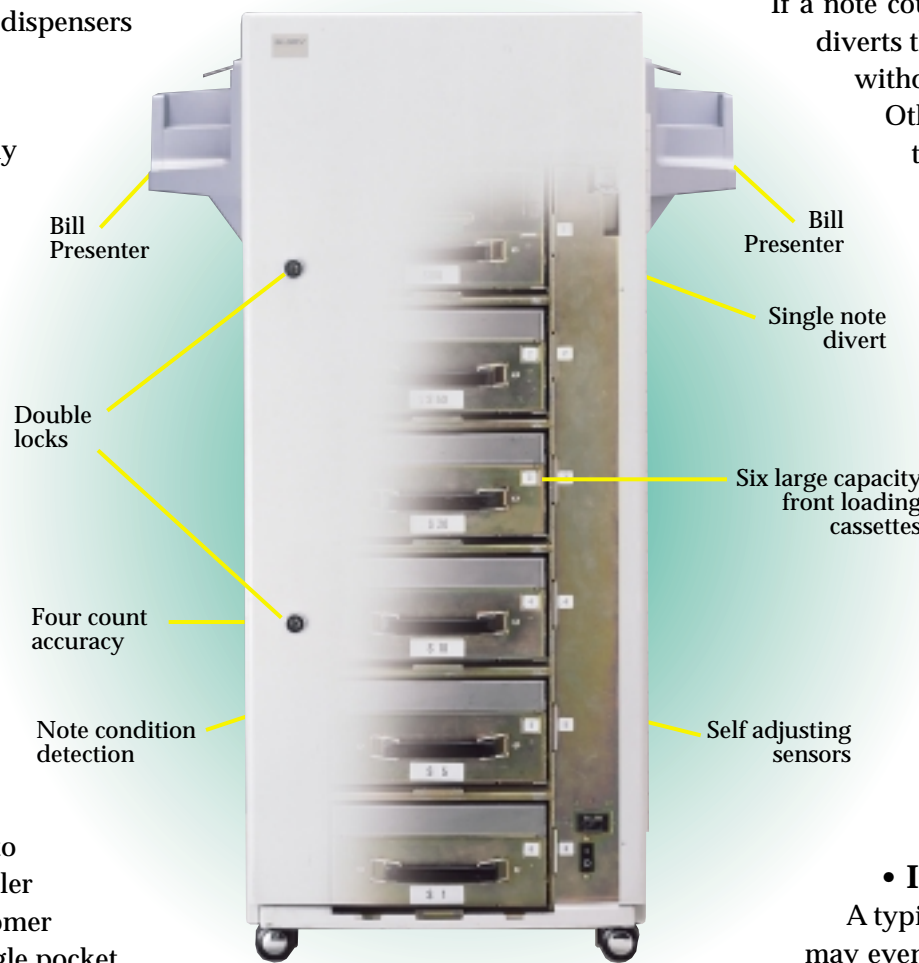

If a note counting error or severe mutilation is detected, the PD-61 diverts that single suspect note and fulfills the requested amount without stopping, dramatically reducing overall process time. Other model dispensers divert ALL the counted notes each time a suspect note is detected. Imagine what happens when the 48th or 98th note of 100 is detected as the suspect note? Multi-note divert systems reject all counted notes to a reject bin, and start counting and processing all over again. The PD-61 Single Note Diversion system reduces that large quantity of daily note rejections to an absolute minimum. The PD-61 divert bin requires reconciliation only once a week, minimizing daily handling and costs associated with diverted note reconciliation. A PD-61 utilizes more usable, and dispensable notes from each cassette.

### • Smallest Footprint Size

With the smallest and shortest cabinet design on the market, the PD-61 fits conveniently under most existing teller lobby or drive-thru countertops saving your budget thousands of dollars required for renovations at installation time.

### • Increased Vault Buy Productivity

A typical vault buy takes a long time, involves two tellers, and may even include extra trips to the vault for processing, verifications, and authorization. With a PD-61, vault buys are available for all your tellers, providing local convenience, significant time savings, averaging less than 60 seconds, for both the bank and your customers.

## Glory's Leadership In Technology

### Vacuum Feeding Mechanism

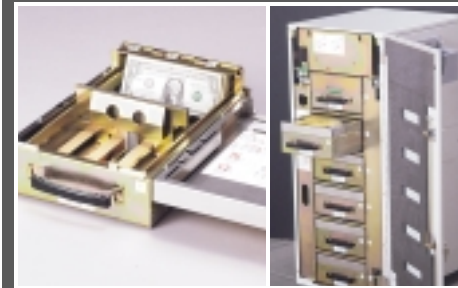

The PD-61 uses vacuum feed technology for the most reliable, low maintenance dispensing available. Bills are drawn cleanly and evenly from each cassette and dispensed simultaneously to either of the two bill presenters with surprising speed and accuracy.

### Note Condition Recognition System

Glory's advanced Note Condition Recognition System automatically sets the PD-61 to varying note conditions, creating and setting thresholds for the diverse thickness of notes. With the speed and dependability of comparable machines, optimum performance is achieved for all note conditions and qualities.

### Self Adjusting Photo-optic Sensors

Self-adjusting photo-optic sensors continuously monitor the note detector's status. Down time for cleaning and maintenance is reduced because the unit's optimum power levels are automatically sustained.

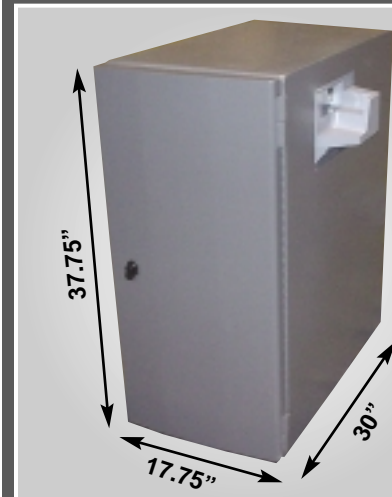

### Front loading cassette

Up to 2,400 note capacity in 6 secure cassettes, stacked vertically for simpler cash loading.

### Easy maintenance

Escrow / Delivery module easily slides out for convenient access to presenter. Additional access panels allow for quick on-line inspections and adjustments.

### Optional Features

UL-rated enclosure for high-level security is available to optimize performance at your location.
